SUMMARY

Computer Science graduate with hands on experience in Machine Learning, Deep Learning, and Generative AI, including building RAG pipelines, multi-agent workflows, and scalable AI chatbots. Proficient in prompt engineering, API integrations, and containerized deployments, with a strong full-stack and backend foundation. Honored with the Best Research Final Year Project Award for developing a high-accuracy real-time deepfake detection system.

EXPERIENCE

AI Intern

Oct 2025 – Jan 2026

Systems Limited

Lahore, Pakistan

- Developed and deployed AI-powered chatbot and multi-agent systems using FastAPI, React js, Streamlit, LangGraph, and Docker, enabling scalable, production-ready, and automated AI workflows.
- Designed RAG pipelines cutting average query response time by 40%, supporting 3 concurrent LLM backends in production, applying prompt engineering and AI guardrails to deliver safe, reliable, and context-aware responses.
- Integrated vector databases (e.g. ChromaDB, FAISS) for efficient semantic search and document retrieval, optimizing context injection in RAG-based pipelines.

EDUCATION

Forman Christian College University

Lahore, Pakistan

Bachelor of Science in Computer Science — CGPA: 3.2

Sep 2021 – Sep 2025

Beaconhouse Defense Campus

Lahore, Pakistan

A Levels

Sep 2018 – Sep 2020

PROJECTS

DeepSight: Unmasking manipulated media | *Best Research FYP* | [Github](#)

- Developed an AI-powered deepfake detection platform using CNN, LSTM, Attention Mechanism, PyTorch, React, FastAPI, and Firebase, achieving 89% accuracy with real-time browser-based detection capabilities, along with a web extension for social media integration.

Teleco Chat Bot | [Github](#)

- Built a containerized multilingual telecom support chatbot using FastAPI, LangChain, LangGraph, and Streamlit with RAG, guardrails, and conversational memory for context-aware customer assistance.

FinaniFi AI | [Github](#)

- Engineered a multi-agent AI investment analysis system using React, FastAPI, LangGraph, and GPT-4o, integrating Google Search for real-time financial insights and market analysis.

Loan Default Prediction System | [Github](#)

- Developed a ML based loan default prediction system using publicly available datasets, data preprocessing, and XGBoost to assess repayment risk and detect potential fraudulent loan defaults based on borrower history and income patterns.

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, HTML/CSS, MYSQL, MSSQL

Frameworks: React, Flask, JQuery, React Bootstrap, Tailwind CSS, FastAPI, LangChain, LangGraph

Developer Tools: Git, Github, Docker, VS Code, Visual Studio, Cursor, Claude Code, Ubuntu, Kaggle, Hugging Face

Libraries: Pandas, NumPy, Matplotlib, Pytorch, Scikit Learn

Certifications: Javascript Es6 by Coursera, Intro to Git and Github by Google, AWS severless, Intro to SQL, Joining Data in SQL, Summer M-Lab Program by mindstorm, Rookie Game Jam by Mindstorm
