SUMMARY

I am an enthusiastic and detail-oriented professional with a strong passion for problem-solving. With solid analytical abilities and a proven track record of meeting deadlines, I thrive in tackling complex challenges. I enjoy exploring new domains, particularly in web development and emerging technologies such as Machine learning and Generative AI. I was honored with the Best Research FYP Award for my final year project and have recently graduated from Forman Christian College University.

WORK EXPERIENCE

Systems Limited

Sep 2025 to Jan 2026

Ai internship

- Designed and implemented Retrieval-Augmented Generation (RAG) pipelines with integrated AI guardrails to ensure safe, reliable, and context-aware model responses.
 - Developed AI chatbot systems using FastAPI (backend) and Streamlit (frontend), incorporating advanced prompt engineering and optimized model workflows.
 - Built agentic AI workflows using LangGraph, enabling structured multi-step reasoning, agent coordination, and automated task execution.
 - Engineered and deployed scalable multi-agent AI systems using Docker, ensuring modular, containerized, and production-ready architectures.
-

EDUCATION

Bachelor's in Computer Science

Sep 2021 - Sep 2025

Forman Christian College University (**CGPA: 3.2**)

A Levels

Sep 2018 - Sep 2020

Beaconhouse Defense Campus

- **Relevant Courses:** Maths, Physics, Chemistry
-

TECHNICAL SKILLS:

Languages: Python, Javascript, C, MS SQL, MYSQL

Technologies: Docker, Ubuntu, Git, Github, AWS, Vs Code, Google Colab, Firebase, Kaggle

Certifications: Javascript Es6 by Coursera, Intro to Git and Github by Google, AWS severless, Intro to SQL, Joining Data in SQL, Summer M-Lab Program by mindstorm, Rookie Game Jam by Mindstorm

PROJECTS

DeepSight: Unmasking manipulated media

[Github](#)

Best Research Final Year Project

- Developed a high-accuracy (89%) deepfake detection model using CNN (ResNeXt-50) with attention mechanisms and LSTM. Integrated the model into a full-stack web application with a React frontend, FastAPI, and Firebase for the backend. Also created a JavaScript browser extension to detect deepfake videos on social platforms in real-time.

Teleco Chat Bot | *Langchain, OpenAI, ChromaDB, Langgraph, Fast Api, Streamlit, Docker*

[Github](#)

- A containerized, multi-agent telecom chatbot built with FastAPI, LangChain, LangGraph, and Streamlit that uses RAG and an LLM to provide secure, multilingual (English, Urdu, Arabic) customer support across policies, billing, packages, and troubleshooting. It features intelligent agent routing with guardrails and maintains conversation memory to deliver context-aware, personalized responses across multi-turn interactions.

[Github](#)

Recommendation System | *NumPy, Seaborn, Matplotlib, Scikit-learn, SVD*

- Developed an SVD-based recommendation system to predict user purchases, predicted future trends and visualized purchase patterns.

[Github](#)

Audio Classification | *Pandas, NumPy, Librosa, Scikit-learn, Joblib*

- Developed an audio classification system using MFCC features, extracted audio converted it to text and implementing a Random Forest classifier for evaluation..
